MyHIX

Malaysian Health Information Exchange

What is Malaysian Health Information Exchange (MyHIX)

Is the sharing of patient's discharge summary between the facilities of Health Ministry using Hospital Information Systems (HIS) and Clinic Information System (CIS) application systems.

Summary of physical examination, previous history, laboratory investigation, diagnosis and treatment are included in patient's discharge summary.

Why MyHIX is implemented?

To ensure continuous delivery of health care.

Where is MyHIX implemented?

It is implemented at four (4) Health Ministry facilities as a pilot project namely:

- Hospital Putrajaya
- Klinik Kesihatan Putrajaya, Precint 9
- Hospital Tuanku Ja'afar, Seremban
- Hospital Port Dickson

What are the benefits of MyHIX?

1. It is a basis for creation of life time health record for an individual
2. It is a basis for follow up care at any nearest health facilities for the comfort of patients

3. To reduce repeating and overlapping of investigations
 4. To enable the delivery of immediate treatment especially during emergency
- How will MyHIX be implemented?
Patient who receives treatment in these facilities will automatically be using MyHIX system.

Patients' medical information is strictly confidential and only the doctor involved in treating patients is authorized information based on strict Government law and regulation.

What will happen if an individual does not want to participate?

The individual has to complete the "MyHIX Medical Information opt out form"

Whom should I contact for further information?

Please refer to the doctor who is treating you.
